

1 Product Overview

The omnidirectional RF jamming device emits electronic jamming signals on different frequencies to suppress UAV control, navigation and video-transmission links, forcing UAVs to land automatically or leave the area. It protects low-altitude airspace and serves as a security guardian for major events and important sites.

2 Key Features

- Multiple Jamming Types

The device can cut off the navigation, remote-control and video-transmission signals of common consumer-grade UAVs, industrial UAVs, model aircraft, FPV drones and DIY modified UAVs, causing UAVs to return or land.

- Full Navigation Jamming Coverage

The response frequency range covers GPS, GLONASS, BeiDou, Galileo and other navigation systems.

- Selectable Jamming Bands

Jamming signals on different bands can be transmitted individually, in combination, or simultaneously.

- Stable Jamming

The device can perform long-duration jamming, and the emitted jamming signal has no frequency offset.

- Strong Adaptability

Suitable for various complex environments, with water- and dust-resistant performance.

- Omnidirectional Jamming

Emits jamming signals omnidirectionally to provide 360° all-around defense.

Basic Specifications	
Operating Frequency Band	400MHZ、800MHZ、900MHZ、1.2GHZ、1.4GHZ、1.5GHz、2.4GHz、5.8GHZ、5.1GHz~5.9GHz
Jamming Distance	1.5-2 km (varies with RF environment and UAV model)
Device Power Consumption	≤600W
Power Supply Method	AC220V
Coverage Angle	Horizontal 360°
Protection Rating	IP65
Continuous Operating Time	Supports 24/7 outdoor operation
Control Interface	RJ45
Weight	30kg

Dimensions	489mm*461mm*233mm
Operating Temperature	-40°C ~ +60°C
